

David Mecerreyes

Graduated from the University of the Basque Country in 1994, DM obtained his Ph.D. degree in 1998 in Polymer Chemistry from University of Liege (Belgium). After he moved to IBM Almaden Research Center and Stanford University in California for a postdoctoral stay. Back in Spain he spent 10 years as leader of the Nanotechnology Activities at CIDETEC-IK4 Center for Electrochemical Technologies. In January 2011, he took an Ikerbasque Research Professor position at POLYMAT- University of the Basque Country. At the present time, he is leading the Innovative Polymers Group, a group specialized in polymer chemistry. He has (co)authored near 200 scientific articles. In 2011 he got a Consolidator ERC Grant with the project iPES “Innovative Polymers for Energy Storage”. Actual research interest include:

- Synthesis and application of poly(ionic liquid)s
- Organocatalysed polymerizations
- Redox polymers for electrochemical energy storage
- Polymers for bioelectronics
